Prasad Shinde

Software Developer At FyreGig | Aspiring Software Engineer |
Python & Flutter Developer | Passionate About Transforming
Education Through Technology

Mumbai, Maharashtra, India

Summary

I am an aspiring software engineer with nearly 2 years of experience in application development, specializing in Python and Flutter. My journey includes a valuable internship at Bynocs, where I played a key role in developing an application for my final year project. This project earned us the 2nd prize in our college's Computer Engineering department, showcasing our ability to deliver impactful and effective solutions.

I have a strong foundation in both backend and frontend development, with expertise in Flutter for cross-platform mobile applications, as well as experience in writing server-side code using JavaScript and Node.js. My technical skill set also includes integrating AI to enhance educational tools and creating dynamic, user-friendly interfaces.

Passionate about leveraging technology to transform education and improve learning experiences, I am excited to contribute to innovative projects and forward-thinking teams that push the boundaries of technology and education.

Experience

FyreGig

Software Developer

August 2024 - Present (5 months)

Mumbai, Maharashtra, India

Freelance

Application Developer

June 2024 - Present (7 months)

Mumbai, Maharashtra, India

Worked as a freelance developer for a major hotel chain in Mumbai with multiple outlets. Developed a comprehensive app similar to Swiggy and Zomato, but exclusively for this hotel chain. The app features outlet-specific menus, allows users to place orders, live track their orders, and manage loyalty points akin to Flipkart Super Coins.

Key Responsibilities and Technologies:

Flutter: Designed and developed a cross-platform mobile app for a seamless user experience.

Node.js & JavaScript: Built backend services and APIs to support the app's functionality.

MongoDB: Utilized for effective data management and real-time updates.

PetPooja POS Integration: Integrated the app with PetPooja's POS system to synchronize orders and transactions.

This project enhanced my skills in mobile app development, real-time data handling, and POS system integration, tailored specifically for a multi-location restaurant chain.

Mumbai, Maharashtra, India

Bynocs is a cloud-based platform focused on advanced AI-driven therapy for treating amblyopia (lazy eye) and digital eye strain through digital games and activities. During my internship, I worked with React Native to develop and

enhance applications, integrating various pre-developed APIs to support the company's innovative eye care solutions.
